

Student Management System – Mini React Project

Project Overview

A small, real-world inspired React application that demonstrates core React concepts such as routing, state management, forms, and component-based architecture — without using a backend or database.

Features

- Dashboard with student statistics
- Students list with CRUD operations
- Add and Edit student forms
- Student details page
- LocalStorage persistence

Application Pages

/ -> Dashboard

/students -> Students List

/students/add -> Add Student

/students/edit/:id -> Edit Student

/students/:id -> Student Details

Tech Stack

- React (Functional Components)
- React Router DOM
- React Hooks
- LocalStorage
- CSS

React Concepts Covered

- Component-based architecture
- Props and State
- useState and useEffect

- Controlled Forms
- Conditional Rendering
- Routing and Dynamic Routes
- Programmatic Navigation
- Reusable Components

Project Purpose

This project is built to strengthen React fundamentals and demonstrate practical frontend development skills.
